EXPRIMENT-4

4: Create arrays from vectors with dimension names in R and print specific elements of the arrays.

PROGRAM:

```r

# Create a vector
x <- 1:12

# Create dimension names
row_names <- c("Row1", "Row2", "Row3")
col_names <- c("Col1", "Col2")
table_names <- c("Table1", "Table2")

# Create an array with dimension names
arr <- array(x, dim = c(3, 2, 2),
             dimnames = list(row_names, col_names, table_names))

# Display the array
print(arr)

# Print specific elements
print(arr[1, 1, 1])
print(arr[2, 2, 1])
print(arr[3, 1, 2])

```

OUTPUT:

```
, , Table1

     Col1 Col2
Row1    7   10
Row2    8   11
Row3    9   12

>
> # Print specific elements
> print(arr[1, 1, 1])
[1] 1
> print(arr[2, 2, 1])
[1] 5
> print(arr[3, 1, 2])
[1] 9
>
```
